

A high-deductible plan that covers the medications you need to stay healthy, up front.

Preventive services can help you stay healthy by identifying and treating illnesses early, saving you time and money in the long run. That's why we don't require people on our high-deductible health plan to meet their deductible before covering medications in some categories.

You can read through our prescription drug list to see more than 450 medications we cover in the following categories:

- Asthma and chronic obstructive pulmonary disease (COPD)
- Blood thinners
- Name-brand contraceptives
- Cardiovascular disease
- Cholesterol
- Diabetes, including insulin, non-insulin and test strips
- Osteoporosis
